Dear Bpk Anvar Kamari

Kedutaan Besar Republik Islam Iran di Jakarta, Indonesia

PT PGN Tbk plans to develop LNG facilities in the eastern part of the country to facilitate gas supply for power plants owned by PT PLN. Thus LNG infrastructure will continue to play a dynamic role in Indonesia, with the push factor coming from the dynamic power generation and industrial sectors.

East Indonesia will see increase in LNG to Power integration projects below 200 MW and the need for Floating LNG Power Plant and Barges. These niche areas have generated lots of stakeholders' interest and will make Small LNG distribution and shipping key to ensure LNG reaches remote areas for power generation and industries.

The much anticipated **8th Annual LNG Transport, Handling and Storage 2018 Forum** will again set forth at the **Padma Resort, Bali** this **4-7 September 2018** - bring together key LNG and Natural Gas stakeholders to Bali, Indonesia once more.

This business-critical forum is co-organized by *All Events Group* and *Energy Nusantara*.

More invitation is available on http://www.lng-world.com/lng_bali2018/
